How does diabetes cause kidney disease? What increases my chances of diabetic kidney disease? How can I tell if I have diabetic kidney disease? How can I keep my kidneys healthy if I have diabetes? How can I cope with the stress of managing my diabetes? Does diabetic kidney disease get worse over time? What is diabetic kidney disease? Diabetic kidney disease is a type of kidney disease caused by diabetes . Diabetes is the leading cause of kidney disease. About 1 out of 3 adults with diabetes has kidney disease. 1 The main job of the kidneys is to filter wastes and extra water out of your blood to make urine. Your kidneys also help control blood pressure and make hormones that your body needs to stay healthy. Your kidneys are located in the middle of your back, just below your rib cage. When your kidneys are damaged, they can't filter blood like they should, which can cause wastes to build up in your body. Kidney damage can also cause other health problems. Kidney damage caused by diabetes usually occurs slowly, over many years. You can take steps to protect your kidneys and to prevent or delay kidney damage. Watch a video about diabetes and kidney disease . What are other names for diabetic kidney disease? Diabetic kidney disease is also called DKD, chronic kidney disease, CKD, kidney disease of diabetes, or diabetic nephropathy. How does diabetes cause
